

# **Communication Protocol of Residential Hybrid Inverter**

## V1.0.25

Version number	Date	Note
1.0.12	2016/02/22	Initial released version.
1.0.13	2016/10/13	Modify content for register:
		5003-5005,13036-13038,13055.
1.0.14	2017/12/05	Add register:
		2582-2626 (Firmware Version).
1.0.15	2018/03/12	1.Modify register 13008-13009 data
		type from U32 to S32.
		2.Add Appendix 1.3 fault code
		instructions.
1.0.16	2018/06/13	1.Add description for valid device
		types.
	Y	2. Add device code definition to
		register 5000.
7//>		3.Modify register 13061 data range
		from 30.0-48.0V to 32.0-48.0V.
1.0.17	2018/07/17	Delete content for register 13076-
		13079 and 13081-13082.
1.0.18	2019/01/05	1.Add register 13086 (Meter Comm.
		Detection).

		2. Delete content for register 2582-
		2626.
1.0.19	2019/05/28	Add new valid device types:
		SH5K-30/SH3K6-30/SH4K6-30,
		SH3.6RS/SH5.0RS/SH6.0RS,
		SH5.0RT/SH6.0RT/SH8.0RT/SH10RT.
1.0.20	2020/04/07	1.Add register 4954 (ARM software
		version) and register 4969 (DSP
		software version).
		2.Modify register 13087 (Export Power
	.4	Limitation) to include:
		SH5.0RT/SH6.0RT/SH8.0RT/SH10RT.
		3.Add Running in External EMS mode
		0x4000 in Appendix 1.1 system state
<	\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	for
		SH5.0RT/SH6.0RT/SH8.0RT/SH10RT.
1.0.21	2020/05/08	1.Modify register 13055 to include Li-
		ion TAWAKI.
		2.Modify register 13062 data range
		from 20.0-60.0°C to 20.0-70.0°C.
		3.Modify register 13068 data range
		from 40.00-60.00V to 40.00-63.00V.
L	1	1

ify register 13069 data range				
0.000 50.000 / +- 30.000				
from 30.000-50.000V to 30.000-				
53.000V.				
ify register 13080 data range				
-20s to 1-1000s.				
d register 5622 (Export limit min),				
ister 5623 (Export limit max),				
ister 5628 (BDC rated power),				
ister 5635 (Max. Charging				
rent (BMS)), register 5636 (Max.				
charging Current (BMS)).				
dify register 13052				
rge/discharge power data				
ge to 0-100 times of BDC rated				
ver (RO register 5628) for				
5.0RT/SH6.0RT/SH8.0RT/SH10RT.				
dify register 13074 Export power				
tation to 10 times of Export limit				
(RO register 5622) -10 times of				
ort limit max (RO register 5623).				
ify notes about				
RS/SH3.6RS/SH4.0RS/SH5.0RS/				

		SH6.0RS for register
		5000,5622,5623,5628,5635,5636,13087.
		2.Add new valid device types:
		SH3.0RS/SH4.0RS
1.0.24	2022/11/29	1. Add new valid device types:
		SH5.0RT-20/SH6.0RT-20/SH8.0RT-
		20/SH10RT-20.
1.0.25	2023/01/12	1. Add new valid device types:
		SH5.0RT-V112/SH6.0RT-
		V112/SH8.0RT-V112/SH10RT-V112.
	_^	2. Add new valid device types:
		SH5.0RT-V122/SH6.0RT-
		V122/SH8.0RT-V122/SH10RT-V122.

## Valid device types:

SH3K6.SH4K6.SH5K-20.SH5K-V13

SH3K6-30.SH4K6-30.SH5K-30

SH3.0RS .SH3.6RS.SH4.0RS.SH5.0RS.SH6.0RS

SH5.0RT .SH6.0RT.SH8.0RT.SH10RT

SH5.0RT-20 .SH6.0RT-20.SH8.0RT-20.SH10RT-20

SH5.0RT-V112 .SH6.0RT-V112.SH8.0RT-V112.SH10RT-V112

SH5.0RT-V122 .SH6.0RT-V122.SH8.0RT-V122.SH10RT-V122

# 1.Introduction

This communication protocol, complies ModBus, applies to the communication between Sungrow grid-connected hybrid inverters (SH-inverter) and monitoring system.

# 2. Communication Interface

#### 1.1 RS485

Item	Default setting				
Address	Inverter: 1 – 247 settable				
	PC: 1 – 247 settable				
Broadcast	Yes				
Baud rate	9600 bit/s				
Check bit	Null or settable				
Data bit	8				
Stop bit	1				
Mode	RTU				
Appliance interface	RS485-2W cable connection				

### 1.2 Ethernet (optional)

### Default:

- DHCP: ON

- Port: 502

# 3. Address Definition

- Read-only register type supports the command code of 0x04.
- Holding register type supports the command codes of 0x03, 0x10 and 0x06.
- 3.1 Running information variable address definition (read-only register)

### Note:

Communication address = protocol address - 1. If data of address 5000 is to be inquired, the corresponding sending address data is 4999 (0x1387);

U16: 16-bit unsigned integer, big-endian;

U32: 32-bit unsigned integer; little-endian for double-word data. Big-endian for byte data;

S16: 16-bit signed integer, big-endian;

S32: 32-bit signed integer; little-endian for double-word data. Big-endian for byte data

Power factor: + means leading; - means lagging, 1000 means power factor 1.000, 950 means power factor 0.95.

## Appendix 1.3 Fault code instructions

Inverter fault analysis by bit:

For example:

Inverter alarm: 0x00102000 (0001 0000 0010 0000 0000 0000b)

bit13 & bit20 is set.

According the following table, the low word base code of the inverter alarm is 70 and the high word base code is 500. So the bit13 represents a fault code of 083 (i.e. 70+13), and the bit 20 represents a fault code of 504 [i.e. 500+(20-16)].

## Appendix 1.4 Examples

Take ComTest for example.

#### 1.1 Acquire one piece of running information

Supposed that the inverter address is 1, it needs to acquire data from address 5000 of 3x address type.

The PC sends (HEX):

01 04 13 87 00 01 85 67

The inverter replies (HEX):

01 04 02 00 22 39 29

Note: The type code of inverter SG4KTL is 0x0022.

### 1.2 Acquire multiple running information

Supposed that the inverter address is 1, it needs to acquire 10 data from address starting from 5000 of 3x address type

The PC sends (HEX):

01 04 13 87 00 0A C4 A0

The inverter replies (HEX):

01 04 14 00 22 00 28 00 00 00 00 00 05 00 00 00 26 00 00 00 00 00 00 AF F8

Note: The type code of inverter SG4KTL is 0x0022. The nominal output power is 4.0 kW, two-phase. Daily power generation is 0. The total power generation is 5 kWh. The total running time is 38 h. The internal temperature is 0°C. The internal transformer temperature is 0°C.

## 1.3 Acquire SN

Supposed that the inverter address is 1, it needs to acquire 10 data from address starting from 4990 of 3x address type

The PC sends (HEX):

01 04 13 7D 00 0A E4 91

The inverter replies (HEX):

01 04 14 31 32 31 32 31 32 30 30 31 00 00 00 00 00 00 00 00 00 00 9B 56

Note:

- 1. SN data type is UTF-8;
- 2. Serial number is: 121212001
- 1.4 Read one setting datum

Supposed that the inverter address is 1, it needs to read data from address 5000 of 4x address

type.

The PC sends (HEX):

01 03 13 87 00 01 30 A7

The inverter replies (HEX):

01 03 02 07 D8 BA 2E

Note: the data read out is year 2008.

1.5 Read multiple setting data

Supposed that the inverter address is 1, it needs to read 10 data from address starting from

5000 of 4x address type.

The PC sends (HEX):

01 03 13 87 00 0A 71 60

The inverter replies (HEX):

01 03 14 07 DA 00 0A 00 1E 00 09 00 28 00 25 00 CE 00 AA 01 F4 00 00 80 53

Note: The data are October 30th, 2010, 09:40:37; Stop; power limitation enabled, power

limitation value is 50%.

### 1.6 Set one datum

Supposed that the inverter address is 1, it needs to set data from address 5000 of 4x address type.

The PC sends (HEX):

01 10 13 87 00 01 02 07 DA 19 4D

The inverter replies (HEX):

01 10 13 87 00 01 B5 64

Or

The PC sends (HEX):

01 06 13 87 07 DA BE CC

The inverter replies (HEX):

01 06 13 87 07 DA BE CC

Note: The setting data is year 2010

## 1.7 Set multiple data

Supposed that the inverter address is 1, it needs to set 10 data to address starting from 5000 of 4x address type.

The PC sends (HEX):

01 10 13 87 00 0A 14 07 D9 00 0A 00 1E 00 09 00 10 00 00 CE 00 AA 01 F4 00 00 3E 65

The inverter replies (HEX):

01 10 13 87 00 0A F4 A3

Note: The data are October 30th, 2009, 09:16:00, stop, power limitation enabled, power

limitation value is 50%.
